

Strength Training — Day A

Tuesday, August 11, 2026 · Hill warm-up first, then this session · 25 lb/hand is your current dumbbell ceiling

Today's plan: most of the compound lifts are already sitting at your 25 lb ceiling with reps maxed out — the move today is pushing the rep count higher at that same weight rather than adding weight you don't have. Two exercises (Row, Glute Bridge) have real room to progress normally. Full reasoning is in the Notes column.

Exercise	Target	Last Time (8/4)	Today's Target	Actual (fill in)
Goblet Squat (dumbbell)	3 x 8-12	3 x 12 @ 25 lb	3 x 15+ @ 25 lb at weight ceiling, extend reps past the plan's usual top	____ / ____ / ____
Dumbbell Romanian Deadlift	3 x 8-12	3 x 12 @ 25 lb	3 x 15+ @ 25 lb same as squat — at ceiling, push reps	____ / ____ / ____
Dumbbell Floor/ Bench Press	3 x 8-12	3 x 8 @ 25 lb	3 x 9-10 @ 25 lb not maxed yet — still room in the rep range	____ / ____ / ____
Single-Arm Dumbbell Row (per side)	3 x 8-12/side	5 / 5 / 4 @ 20 lb (under target)	3 x 6-8 @ 20 lb hold weight, focus on hitting the range before adding more	____ / ____ / ____
Single-Leg Balance Reach (per side)	2 x 8-10/side	3 x 12 @ 8 lb	3 x 12 @ 8 lb already past target reps — hold steady, this one's working	____ / ____ / ____
Plank	2 x 30-45 sec	3 x 45 sec (shoulder-tap)	3 x 45-50 sec keep the shoulder-tap variation, nudge duration up slightly	____ / ____ / ____
Dumbbell Farmer's Carry	3 x 40-60 ft	3 x 60 ft @ 25 lb/hand	3 x 70-80 ft @ 25 lb/hand at weight ceiling and top of distance range — extend distance	____ / ____ / ____
Glute Bridge	3 x 15	3 x 15 @ 15 lb	3 x 15 @ 20 lb reps maxed last time — try the next weight up	____ / ____ / ____
Band Face Pull	3 x 12-15	3 x 15, red band	3 x 15, red band if a heavier band is on hand try it; otherwise add a 2-sec pause at the end range	____ / ____ / ____

Deload reminder: every 4-6 weeks, drop to ~60% of usual weight for one week. No deload logged yet since the program started 7/12 — you're now in that 4-6 week window (8/9-8/23), so today's a reasonable week to consider one if you're feeling it, not mandatory yet.

25 lb ceiling protocol (in order once weight can't increase further): 1) extend the rep ceiling past the plan's usual top range 2) add tempo/pause (3-4 sec lowering, or a 2-sec pause) once reps climb past ~20 3) swap in a new isolation exercise for the same muscle group. New/heavier equipment is your call to make, never assumed.
