

Strength Training — Day B

Thursday, July 30, 2026 | 8:30–9:45am

Warm-up: 15-minute hill warm-up walk, then strength training below (45–60 min total).

Last Session (Thu, Jul 17)

Sumo Deadlift, Reverse Lunge, Overhead Press, Band Bent-Over Row, Side Plank, and Band Face Pull all hit or blew past the top of their rep range on every set — a clear, across-the-board signal it's time to add load. The one exception: Stability Ball Hip Bridge dropped off across sets (15 → 8 → 0 reps), suggesting real fatigue on that movement rather than a progression-ready exercise — worth keeping an eye on form/control there today rather than pushing it.

Exercises

Exercise	Last Time	Today's Target	Set 1	Set 2	Set 3
Dumbbell Sumo Deadlift	20 lb x 15 (x3)	25 lb x 8-12			
Dumbbell Reverse Lunge (side)	10-15 lb x 15	15 lb x 8-10			
Dumbbell Overhead Press	8-10 lb x 15	10-12 lb x 8-12			
Band Bent-Over Row	band x 15 (x3)	heavier band x 10-15			
Stability Ball Hip Bridge/Curl	15 / 8 / 0 reps	bodyweight x 10-12*			
Side Plank (per side)	30 sec (x3)	30-45 sec			
Single-Arm Suitcase Carry (side)	20-25 lb	25 lb x 40-60 ft			
Band Face Pull	band x 15 (x3)	heavier band x 12-15			

Set columns are for weight used and reps completed (e.g. "25 lb x 10") — fill in by hand during the session.

Progression: once you hit the top of the rep range on all sets for an exercise, add weight next session and drop back to the bottom of the range (double-progression, Fortify-compatible).

Deload: every 4–6 weeks, same exercises at ~60% of usual weight for one week.

*Bodyweight exercise — not on the same load-progression scheme; recommendation is to hold steady and prioritize completing all sets with control given last session's fatigue dropoff.
