

First-ever Day C session. No history to compare against, so every exercise below is a suggested starting point rather than a progression call. Starting weights are set conservatively where the movement is new and balance-heavy (unilateral squat/hinge, overhead carry, plank-based row), based on where your other unilateral lifts actually began — Reverse Lunge and Single-Leg Balance Reach both started at 10 lb, Overhead Press at 8–10 lb. Prioritize clean form and balance over hitting the top of the rep range today; it's fine to come in under target on a first pass.

1. Bulgarian Split Squat (dumbbell)

3 × 8–12 / side

TODAY

1 _____ lb × _____

2 _____ lb × _____

3 _____ lb × _____

Start at 10 lb/hand. A new, more balance-demanding unilateral squat than Day B's Reverse Lunge (rear foot elevated), which itself started at 10 lb. Rear foot on a chair/step if you don't have a bench — hold something for balance the first few reps if needed, no shame in it on a brand-new movement.

2. Single-Leg Romanian Deadlift (dumbbell)

3 × 8–10 / side

TODAY

1 _____ lb × _____

2 _____ lb × _____

3 _____ lb × _____

Start at 10 lb/hand — or bodyweight only for the first set if balance feels shaky. Single-leg hip-hinge balance is typically the hardest of the new movements to stabilize under load; better to nail the pattern light today than fight for reps at a weight that breaks form.

3. Dumbbell Incline Press (stability ball as incline support)

3 × 8–12

TODAY

1 _____ lb × _____

2 _____ lb × _____

3 _____ lb × _____

Start at 10 lb/hand — well under your 25 lb Floor Press weight. The stability ball adds real core/balance demand on top of the incline angle itself; this isn't comparable to your flat press load. Get the ball position and rep groove down first, load it up over future sessions.

4. Renegade Row (dumbbell)

3 × 6–10 / side

TODAY

1 _____ lb × _____

2 _____ lb × _____

3 _____ lb × _____

Start at 10 lb/hand — lighter than your 20 lb standing Single-Arm Row. The plank hold underneath is the real challenge here; if your hips rotate or sag while rowing, that's the signal to drop weight further, not push reps.

5. Bird Dog

2 × 8–10 / side

TODAY

1 reps _____

2 reps _____

Bodyweight. Anti-rotation core work — focus on keeping the hips level and moving slowly, not speed or rep count.

6. Dead Bug

2 × 10–12 / side

TODAY

1 reps _____

2 reps _____

Bodyweight. Keep your lower back flat against the floor throughout — that's the real form check, not how far the leg extends.

7. Dumbbell Overhead Carry

3 × 30–40 ft / side

TODAY

1 _____ lb × _____ ft

2 _____ lb × _____ ft

3 _____ lb × _____ ft

Start at 10 lb/hand — well under your 25 lb Farmer's/Suitcase Carry weight. Loaded overhead is a much bigger shoulder-stability ask than a carry at your side. Arm should stay locked out directly over your shoulder, not drifting forward — drop the weight if it does.

8. Single-Leg Glute Bridge

3 × 10–12 / side

TODAY

1 reps _____

2 reps _____

3 reps _____

Bodyweight to start. Same pattern as your Day A bilateral Glute Bridge, which started bodyweight before you added the band + 25 lb weight over time — expect this one to follow the same arc once the single-leg version feels solid.

9. Band Pull-Apart

3 × 15–20

TODAY

1 band _____ reps _____

2 band _____ reps _____

3 band _____ reps _____

Start with a lighter band than your purple Face Pull band (red or black) — Pull-Apart loads the rear delts differently than Face Pull and tends to feel harder at the same band tension. Build toward 20 reps before moving up.
