

Day A

Tuesday, September 29, 2026 — regular exercises plus two new arm exercises

Nothing goes up today. Every exercise repeats last Day A's (9/22) weight and reps. Goblet Squat, Bench Press, and Band Face Pull restart their three-session count at zero, since they were part of the shoulder flare. The two arm exercises at the end are new: start light and slow.

Watch today: Dumbbell Bench Press and Plank shoulder taps (both possible contributors to the 9/22 shoulder flare), Band Face Pull (the band pull-apart bothered your arm on Sunday), Glute Bridge (the single-leg version made your hip sore on Sunday), and the two new arm exercises. Stop that exercise if irritation comes back, even mildly, and write down which one and where.

Notes: Warm-up is 15 minutes. A flat walk is fine, and the hill is fine too if the hip feels completely normal. Hammer Curl and Triceps Kickback are for arm definition: the weights are a starting guess, so if 12 reps feels easy, note it and they go up next time. Glute Bridge is at both the 20-rep ceiling and the 30 lb cap, so its next step will be a pause at the top, not today. Stand or walk around between exercises rather than resting seated. Stop rule: any sharp, burning, tingling, or spreading pain is a stop, and mild irritation in a watch exercise is a stop for that exercise only.
